

License	Short Description
<b>No License</b>	Code is fully copyrighted; others cannot legally use, modify, or distribute it.
<b>Apache License 2.0</b>	Permissive license allowing use, modification, and distribution; includes patent protection and requires attribution.
<b>GNU General Public License v3.0 (GPL-3.0)</b>	Strong copyleft license; derivative works must also be open-sourced under GPL-3.0.
<b>MIT License</b>	Very permissive; allows almost unrestricted use with minimal requirements (copyright notice).
<b>BSD 2-Clause "Simplified" License</b>	Permissive; similar to MIT but with slightly different wording and attribution requirements.
<b>BSD 3-Clause "New" or "Revised" License</b>	Like BSD 2-Clause, but prohibits using contributor names for endorsement.
<b>Boost Software License 1.0</b>	Permissive license mainly for C++ libraries; allows commercial and open use with attribution.
<b>Creative Commons Zero v1.0 (CC0)</b>	Public domain dedication; no restrictions on use, modification, or distribution.
<b>Eclipse Public License 2.0 (EPL-2.0)</b>	Weak copyleft; modifications to EPL code must be shared, but larger works can remain proprietary.
<b>GNU Affero General Public License v3.0 (AGPL-3.0)</b>	Like GPL-3.0, but also requires sharing source when software is used over a network (e.g., SaaS).
<b>GNU General Public License v2.0 (GPL-2.0)</b>	Strong copyleft license; derivative works must also be licensed under GPL-2.0.
<b>GNU Lesser General Public License v2.1 (LGPL-2.1)</b>	Weak copyleft; allows linking with proprietary software under certain conditions.
<b>Mozilla Public License 2.0 (MPL-2.0)</b>	File-level copyleft; only modified files must be open-sourced.
<b>The Unlicense</b>	Places code into the public domain with no conditions or restrictions.
